Project Title: FindBack

Problem Statement: When students lose their items but when they go try to report it to the DO's office, sir Dennis is sometimes not there, but fear not, FindBack can help you track on where your item is online instead of complying a paper that you lost an item.

If a student found an item, they can record it through the code and when the owner of item reports that lost item, the code will tell them that the item is found and either with the DO's office or with the person who found it, it varies on what the recorder chooses.

Project Objectives: FindBack aims to help students have better knowledge of where there item is and not only that it also aims to help the DO have less paper work to take care of.

Planned Features:

- Have an option to record an item that the person found.
- Have an option to report a lost item in order for them to know if their item is found or not.
- Have an option that leads you to a table that shows all the recorded items, the name of the recorder, date recorded and either the item is with the DO or with the person who recorded it.

Planned Input and Outputs:

- Input the name, date and the lost item.
- Output the recorded lost items.

Logic Plan (Flowchart):
